

Exercise 4 – Domain Modeling

Learning objectives: Practice UML by modeling use-cases

Remember, our project is:

Browser-Based TicTacToe for 2 Players

A detailed description can be found in exercise 1. In addition, use the requirements document as a basis for the following task.

Task – Domain Model for Use-Cases

Pick at least **two** use cases for the TicTacToe project: For both use cases, create a **Domain Model**.

Specifically, create UML-Sequence Diagrams that show how our stakeholders interact with one another and/or the game as part of the given use case.

Warning: Remember, domain models model the domain (in this case people and the game they play), they do not model technical implementation aspects.

You can use any software of your choice to create the UML-Sequence diagrams. In the end, generate JPG or PNG files with the appropriate names and place them in your Git repository's **docs** directory.

Hint: <https://draw.io> has some nice utilities to create UML-Sequence-Diagrams. It can even generate a PNG file that can be viewed using any image viewer, but also read back into draw.io to edit it further.
